

GarminWO

User Guide

Workout import via image — Powered by Claude & Gemini

OVERVIEW

GarminWO is a Chrome extension that lets you import running workouts directly into Garmin Connect from a photo or JSON file. Visual analysis is performed by an AI (Anthropic's Claude or Google's Gemini) that automatically detects steps, paces and conditions for each session.

■ The extension is completely free. You only need an API key (Gemini is free up to 1500 requests/day).

INSTALLATION

GarminWO is available on the **Chrome Web Store**. Installation takes less than 30 seconds, no account required.

1

Search for **GarminWO** on the Chrome Web Store or follow the direct link provided.

2

Then confirm by clicking "Add extension" in the confirmation dialog.

3

The green GarminWO icon appears in the Chrome toolbar. Installation is complete!

■ If the icon is not visible, click the puzzle icon ■ in the top right of Chrome and pin GarminWO.

API KEY SETUP

1. Go to aistudio.google.com/apikey 2. Sign in with your Google account 3. Click "Create API Key" 4. Copy the generated key (starts with "Alza...")

■ Gemini 2.5 Flash is free up to 1500 requests per day — more than enough for personal use.

1. Go to console.anthropic.com 2. Create an account (\$5 free credit on sign-up) 3. Go to API Keys > Create Key 4. Copy the key (starts with "sk-ant-...")

1

In the Chrome toolbar, click the green GarminWO icon.

2

Select the Gemini or Claude tab depending on your key.

3

Paste your API key into the field and click **Save**. A confirmation message appears.

IMPORTING A WORKOUT VIA IMAGE

This is the core feature of GarminWO. It analyses a workout photo (app screenshot, photographed training plan, etc.) and automatically imports it into Garmin Connect.

1

Go to connect.garmin.com in Chrome and sign in to your account.

2

Click "Workouts" in the main menu. The GarminWO button appears automatically next to Garmin's native button.

3

Click the **+** button to open the import window.

4

Drag and drop your photo into the designated area, or click to open the file browser. Accepted formats: JPG, PNG.

5

Click **Analyse session**. The AI analyses the image (2 to 10 seconds depending on the engine).

6

If multiple sessions are detected, click the one you want to import.

7

Click **Import into Garmin Connect**. The page reloads automatically and your workout appears in the list.

■ For best results, use clear, well-lit images with sufficient contrast. Screenshots from apps like Garmin, Polar or TrainingPeaks work very well.

IMPORTING A GARMIN JSON FILE

GarminWO also accepts JSON files exported from Garmin Connect, allowing you to duplicate or transfer workouts.

1

On connect.garmin.com, open an existing workout and export it in JSON format.

2

Click the **+** button from the Workouts page.

3

Drag and drop the .json file into the drop zone. The workout is instantly parsed without any API call.

4

Click **Import into Garmin Connect**.

■ JSON import is completely free — no API key is used as no AI analysis is performed.

SUPPORTED STEP TYPES

GarminWO supports all native Garmin Connect step types:

Type	Role
warmup	Warm-up — start of session at free or defined pace
interval	Interval — main effort, can include a pace target
recovery	Recovery — active rest between intervals
cooldown	Cool-down — gradual end of session
repeat	Repeat — group of steps repeated N times

Each step can end based on three conditions: distance (e.g. 400m), duration (e.g. 5min), or lap press (watch button).

TROUBLESHOOTING

Make sure you are on the page connect.garmin.com/modern/workouts. Reload the page. If the problem persists, disable and re-enable the extension in `chrome://extensions`.

Check that your API key is correctly copied (no leading/trailing spaces). For Gemini, ensure the API is enabled in your Google Cloud project. For Claude, verify your account has sufficient credit.

The image may be too blurry, too dark, or the training plan is not in a recognisable format. Try with a clearer image or a direct screenshot.

Your Garmin session has expired. Log back in at connect.garmin.com and retry the import.

PRIVACY & SECURITY

Your API keys are stored locally in Chrome (`chrome.storage.local`) and never transit through a third-party server. Analysed images are sent directly to Anthropic or Google APIs depending on the selected engine, in accordance with their respective privacy policies.

■ GarminWO collects no personal data and has no backend server.
