1

Open Chrome and go to [GarminWO](#).

2

Click on the Gemini icon in the top right corner.

3

Click on the API icon in the top right corner. This will open the API page.

How to use the API

The API is used to retrieve data from the [GarminWO](#) database. It is a REST API (Representational State Transfer) and can be used to retrieve data from the database. The API is located at [GarminWO](#) and can be used to retrieve data from the database. The API is located at [GarminWO](#) and can be used to retrieve data from the database.

1

Open [connect.garmin.com](#) in Chrome and log in to your account.

2

Click on the "API" icon in the top right corner. This will open the API page.

3

Click on the "API" icon in the top right corner. This will open the API page.

4

Click on the "API" icon in the top right corner. This will open the API page. The API is located at [GarminWO](#) and can be used to retrieve data from the database.

5

Click on the "API" icon in the top right corner. This will open the API page. The API is located at [GarminWO](#) and can be used to retrieve data from the database.

6

Click on the "API" icon in the top right corner. This will open the API page. The API is located at [GarminWO](#) and can be used to retrieve data from the database.

7

Click on the "API" icon in the top right corner. This will open the API page. The API is located at [GarminWO](#) and can be used to retrieve data from the database.

The API is used to retrieve data from the [GarminWO](#) database. It is a REST API (Representational State Transfer) and can be used to retrieve data from the database. The API is located at [GarminWO](#) and can be used to retrieve data from the database.

JSON-GARMIN

The JSON-GARMIN API is used to retrieve data from the [GarminWO](#) database. It is a REST API (Representational State Transfer) and can be used to retrieve data from the database. The API is located at [GarminWO](#) and can be used to retrieve data from the database.

1

Open [connect.garmin.com](#) in Chrome and log in to your account. This will open the API page.

2

Generate a JSON object with the following structure:

3

The JSON object should have a key named "workout" with a value of an array of objects. Each object in the array should have a key named "type" with a value of "warmup", "interval", "recovery", "cooldown", or "repeat".

4

Each object in the array should also have a key named "duration" with a value of a number representing the duration in minutes.

Example JSON object:

```
{  "workout": [    {      "type": "warmup",      "duration": 5    },    {      "type": "interval",      "duration": 20    },    {      "type": "recovery",      "duration": 10    },    {      "type": "cooldown",      "duration": 5    },    {      "type": "repeat",      "duration": 10    }  ]}
```

GarminWO — Page 3

GarminWO is a tool that generates workout plans based on your preferences. It uses the Garmin Connect API to fetch workout data and generate plans.

Type	Role
warmup	Warmup — prepares the body for the main workout by increasing heart rate and blood flow.
interval	Interval — a period of high-intensity exercise followed by a period of low-intensity exercise.
recovery	Recovery — a period of low-intensity exercise that helps the body recover from the previous interval.
cooldown	Cooldown — a period of low-intensity exercise that helps the body cool down after the main workout.
repeat	Repeat — a period of low-intensity exercise that repeats the main workout.

The workout plan is generated based on the following parameters:

- Duration: 400 minutes (6 hours and 40 minutes).
- Intensity: 5 (moderate).
- Lap: 1 (one lap).
